

## **LEEMA ELEMENTS CD** **MANUAL SUPPLEMENT AND ERRATA**

### **LIPS mode changes**

Two of the modes have changed name and there are three new modes, two of which allow the for the Elements CD to be used as a transport, using the Elements Precision DAC as the digital to analogue converter.

The third new mode allows the CD to fully control the DAC when the DAC is being used as a pre-amplifier.

The modes that have changed name are:-

- 1.ELEMENTS BAL. This has become:- LIPS:EINT BAL = CD short hand for:-  
LIPS:ELEMENTS INTEGRATED BALANCED INPUT = CD
- 2.ELEMENTS RCA. This has become:- LIPS:EINT IN1 = CD shorthand for:-  
LIPS:ELEMENTS INTEGRATED ANALOGUE INPUT 1 = CD

However, their operation has remained the same.

The new modes are:-

- 1.LIPS:EBAL + DAC = CD shorthand for:-  
LIPS:ELEMENTS AMP BALANCED INPUT + DAC = CD INPUT
- 2.LIPS:EIN1 + DAC=CD shorthand for:-  
LIPS:ELEMENTS AMP ANALOGUE INPUT1 + DAC = CD INPUT

These modes allow the Elements CD to be used as a transport with the Elements Precision DAC as the digital to analogue converter, together acting as a two box CD solution. However, all of the other inputs to the DAC are still accessible. When used with an Elements integrated amplifier, these two new modes will allow the CD player, when set as LIPS master, to select the appropriate input on the amplifier when play is selected on the player.

These two modes define whether the DAC is connected to the amplifier via the balanced input XLR connectors or the analogue input1 RCA connectors for CD

### **New modes continued**

- 3.LIPS:EDAC PREAMP shorthand for:-  
LIPS:ELEMENTS DAC IN PREAMPLIFIER MODE

## **Drop through menu options**

Some of the LIPS driver modes have additional specific parameter menus which are presented automatically for settings relevant to that LIPS mode.

The two additional sub menus allow the user to specify:

1. That an Elements Precision DAC is part of your system (simple yes/no choice).

Set this to Yes (Y) if an Elements Precision DAC is part of your LIPS controlled Elements system. Otherwise the setting should be No (N).

2. That an Elements Integrated amplifier with a specified AV direct input is part of your system (simple Yes/No choice)

Set this to Yes (Y) if a Leema Elements Amplifier, which has an AV direct input specified in its menu options, is part of your LIPS controlled Elements system. Otherwise the setting should be No (N).

## **LIPS Lead**

Instructions for use:

**Black** Connector – Plug into CD Player

**Red** Connector – Plug Into Amplifier/Pre-Amp

(See manual for additional information on set-up)
